

EDITORIAL COMMENTS

We are happy to receive the papers of P. Erdős; P. Erdős and A. Sarközy; and also that of Shi-tuo-Lou and Qi-Yao. In order to publish these quickly we will bring out vol. 15 (1992), vol. 16 (1993) and vol. 17 (1994) as soon as possible. As an important remark we came to know (private communication to K. Ramachandra) that Theorem A of the first paper in vol. 15 (1992) was also proved independently by D.R. Heath-Brown of Oxford, U.K. He had a lot of unpublished material dating back to 1983 regarding Theorem A. The progress in analytic number theory (as is testified by the number of mathematicians who have won distinguished awards of the Hardy-Ramanujan Society) gives courage to all of us. Even a slight look of the results will convince us of their attractiveness, simplicity of statements and the depth of their proofs.
